

## Summer, Fall, or Spring Paid Internship Experience at NASA Langley Research Center, Hampton, Virginia

Kim McKenzie, LARSS Alumni, Crownpoint Institute of Technology

NASA's Langley Aerospace Research Summer Scholars (LARSS) Program provides paid internship opportunities year round for eligible students. Participants gain exciting hands-on research experience while working side-by-side with NASA's finest scientists and engineers who serve as mentors. They are exposed to professional research re-sources and state-of-the-art facilities, attend technical lectures and guided tours, network with peers and NASA employees, and partici-pate in a poster session to present the results of their research activities.

NASA invites rising undergraduate juniors and seniors, and graduate students who are pursuing degrees in science, technology, engineering (most fields), mathematics, materials science, atmospheric science and other aerospace-related fields, as well as other majors that lend support to NASA's mission in special project areas such as accounting, business, public administration, journalism, history, photography and media arts to apply for the LARSS program.

Eligibility Requirements include:

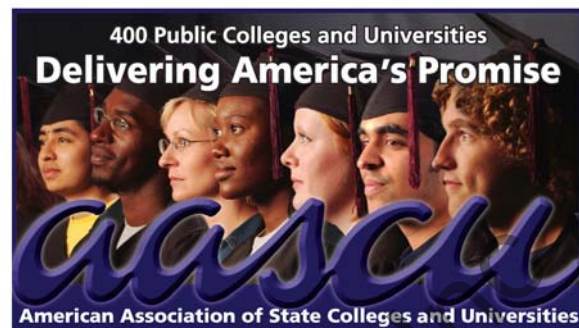

- U.S. citizenship
- Full-time student at an accredited U.S. college or university (Community College students are invited to apply; selection is contingent on matriculation into an accredited 4-year institution.)
- Classification as a rising undergraduate junior or senior, or graduate student (master's or doctoral level) by the start of the program
- Cumulative 3.0 GPA on a 4.0 scale

Opportunities are also available for select rising high-school seniors, college freshmen and sophomores who have previous NASA program experience and a 3.5 GPA.

The LARSS Program hosts more than 150 students each year through its spring, summer, and fall internships.

LARSS Program information, application, and deadlines are available at <http://research.nianet.org/larss>. ✧

### Associations

State colleges and universities Deliver America's Promise by embracing students who traditionally have been underrepresented in higher education. Access is a hallmark of these institutions.
